

## FTP for a MACINTOSH

A third party FTP client will need to be used to access our FTP site from a Mac (Safari or Firefox for Mac will not work).

We recommend using FETCH. A version is available at <http://www.tucows.com/preview/206633>.

Create a new connection by clicking on “File”, “New Connection”.  
In the New Connection window type:

Host: ftp.allegradsm.com  
User ID: allegra  
Password: allegra  
Click OK

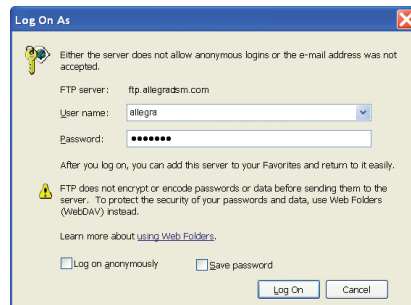

## FTP for a PC

### FTP from Internet Explorer or Firefox:

Open your browser and type in the following URL: ftp.allegradsm.com

You will see a window pop up and ask for the username and password. If the window does not pop up click on “file” and click on “login”. Internet Explorer may route you to Windows Explorer depending on your version of Windows.

Username: allegra  
Password: allegra  
Click OK

### FTP from a third party FTP Client:

We recommend Cute FTP, Smart FTP and WS\_FTP

- Example : Cute FTP  
Create a new session by clicking on “File”, “Site Manager” then “New”.  
For Label for site field type in “Allegra FTP”.  
For the FTP Host Address field type in “ftp.allegradsm.com”.  
4 For the FTP site User Name field type in “allegra”.  
5 For the FTP site Password field type in “allegra”.  
6 For the “FTP site connection port” leave on port 21.  
7 Click on Connect
